P-NUCLEO

CELLULAR REPAIR FORMULA

THE SCIENCE OF SKIN RENEWAL

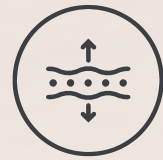

Modern life can accelerate visible signs of skin stress-dehydration, loss of elasticity, and dullness.

P-NUCLEO is formulated to support the skin's natural renewal processes, helping to restore hydration, resilience, and a more radiant appearance.

At the core of this formula is the power of science working in harmony with skin biology.

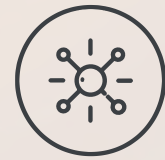

DEEP HYDRATION

IMPROVED ELASTICITY

REFINED TEXTURE

ENHANCED RADIANCE

SMOOTHER LOOKING SKIN

SKIN BARRIER SUPPORT

THE POWER OF POLYNUCLEOTIDES

Polynucleotides are bioactive DNA derived molecules valued in aesthetic medicine for their revitalizing and skin-conditioning properties; they help support the skin's natural repair processes, improving elasticity, resilience, and overall skin quality.

By promoting an optimal environment for skin recovery and hydration, polynucleotides contribute to a smoother, fresher

and more revitalized appearance, particularly in stressed, dehydrated, and tired-looking skin.

Combined with Hyaluronic Acid and Niacinamide, P-NUCLEO's carefully balanced formula is designed for stability, compatibility and optimal skin comfort, offering a comprehensive approach to hydration and skin revitalization.

PDRN

Supports the skin's natural repair processes and helps promote revitalization and resilience.

NIACINAMIDE (VITAMIN B3)

Helps improve skin barrier function, refine texture, even tone and support a healthy, radiant complexion.

HYALURONIC ACID

Intense hydration that attracts and holds water in the skin, delivering visible plumping and smoothness.

ADVANCED SKIN REVITALIZATION THROUGH BIOLOGICAL INTELLIGENCE
